NEED TEAR SHEETS IN A HURRY?

ISI can provide them!

ISI's vast library receives over 4,000 scientific and technical journals from all over the world. And tear sheets of any articles, from either current or back issues, are available to *ISI* subscribers. Using our *ORIGINAL ARTICLE TEAR SHEET* Service is like having your own personal library of journals, a library as close to you as your mail box, telephone or telex.

To get the tear sheets you want, simply mail in an *OATS*® request card which we provide free of charge when you subscribe to any of *ISI's* information services. Within 24 hours after receipt of the card, the article is on its way to you—literally torn from the original source journal. If faster service is desired, dial the *OATS HOT LINE*, 215/923-0460, anytime day or night, or use our TELEX: 84-5305. *OATS* is always on duty. Your tear sheets are sent out within hours after your order is received. And, *ISI* will cover the cost of first class postage.

The cost of *OATS* is $2.00 for articles up to 10 pages, plus $2.00 for each additional 10 pages or fraction. There is a 50¢ service charge for each article.

A *HOT LINE* request, a TELEX request, air mail or special delivery cost an additional 50¢ each per article. *OATS* service may be paid by check or by using pre-paid *ISI* stamps which you can purchase in advance in denominations of $2.00 and 50¢ in units of $10.00. ©1970 ISI

JOURNAL INDEX

ABSTRACTS 125,572 TO 171,532

The Journal Index indicates the abstract number for each journal issue covered. To locate the abstracts for the January 1970 issue of Izv. Akad. Nauk SSSR., Ser. Khim., check the Journal Index under the title and issue number. The pertinent abstract numbers will then be found under 142,537-2,565.

NNC in place of an abstract number indicates that this particular issue of the journal does not contain articles reporting new compounds, new reactions or new syntheses.

ROTAFORM INDEX®

ABSTRACTS 125,572 TO 171,532

The *Rotaform Index* contains all molecular formulas included in the 1970 Annual Cumulative Molecular Formula Index. However, those compounds containing *only* carbon, hydrogen, nitrogen and oxygen have been omitted.

In the *Rotaform Index,* the order of elements in the molecular formula is "rotated" so that each element appears as a heading in the index. Anyone interested, for example, in compounds containing *Iridium* can locate them easily in the *Rotaform Index* under the heading *IR* appearing on page 609 column 507. For each different molecular formula indexed there is a separate entry. To find the associated abstract and compound number for each entry, turn to the Molecular Formula Index. For example, to find SN BR2 I C8 H20 N look in the Molecular Formula Index under C8 H20 BR2 I N SN . . . 169575-7.

This same molecular formula will also be found in the *Rotaform Index* under the headings SN, BR and I.

Users of the *Rotaform Index* will undoubtedly be interested in the additional substructure search capabilities of ISI's new *Chemical Substructure Index* in which, through the use of Wiswesser Line Notations, it is possible to do much more complex or specific types of substructure searches.
